BWBT - Building Overage Repayment Schedule

Show All

Testing whether conditions are true or false and making logical comparisons between expressions are common to many tasks. You can use the AND, OR, NOT, and IF function to create conditional formulas.

23 **1** **2** **3** arguments.

1 formula with the IF function logical_test: The condition that you want to check. value_if_true: The value to return if the condition is true. value_if_false: The value to return if the condition is false.

What do you want to do?

Create a conditional formula that results in a logical value (TRUE or FALSE)

Create a conditional formula that results in another calculation or in values other than TRUE or FALSE

Create a conditional formula that results in a logical value (TRUE or FALSE)

To do this task, use the AND, OR, and NOT functions, and operators.

Example

The example may be easier to understand if you copy it to a blank worksheet.

[How to copy an example](#)

	1	2	3	4	A
